WO 02/11980 PCT/US01/24587

## What is Claimed:

5

1. A material comprising epitaxial titanate formed as a layer on a sapphire substrate.

- 2. The material according to Claim 1 wherein said layer is formed on the C-plane of said sapphire substrate.
- 3. The material of Claim 1 wherein said titanate contains barium and strontium.
- 4. The material of claim 1 wherein said layer is between about 100 and about 3000 nanometers thick.
- 5. The material of claim 1 wherein said layer is between about 300 and about 1000 nanometers thick.
  - 6. The material of claim 1 wherein said titanate has a 111 orientation.
  - 7. The material of Claim 1 wherein said titanate is doped with an ion or ions that change its properties.
- 15 8. The material of Claim 7 wherein said doping ions comprise cesium and bismuth.
  - 9. The material of claim 1 further comprising conductive electrodes for applying a bias or RF signal to the titanate layer.
